📌 Objective
To analyze structured sales data using SQL queries and extract insights related to category performance, regional distribution, and product-level revenue contribution.

📌 SQL Queries Used

```
SELECT category, SUM(sales) AS total
FROM sales
GROUP BY category;

SELECT region, SUM(sales) AS total
FROM sales
GROUP BY region;

SELECT product, SUM(sales) AS total
FROM sales
GROUP BY product
ORDER BY total DESC;
```

📊 Results
Sales by Category:
Technology → 2600
Furniture → 1450
Office Supplies → 150

Sales by Region:
East → 1650
North → 1500
South → 650
West → 400

Top Products:
Laptop → 1200
Phone → 800
Sofa → 700
Monitor → 600
Table → 450

📊 Key Insights

The Technology category dominates overall sales, contributing the highest revenue.
Furniture shows moderate but consistent performance.
Regional variation indicates stronger sales in East and North regions.
A few high-value products contribute significantly to total revenue.
Office Supplies contribute minimally to overall revenue.

Sample SQL Query Output

SQL code: Upload Copy Format Clear

```sql
CREATE TABLE sales (
    order_id INTEGER,
    category TEXT,
    product TEXT,
    region TEXT,
    sales INTEGER
);

INSERT INTO sales VALUES
(1, 'Technology', 'Laptop', 'East', 1200),
(2, 'Furniture', 'Chair', 'West', 300),
(3, 'Office Supplies', 'Pen', 'South', 50),
(4, 'Technology', 'Phone', 'North', 800),
(5, 'Furniture', 'Table', 'East', 450),
(6, 'Office Supplies', 'Paper', 'West', 100),
(7, 'Technology', 'Monitor', 'South', 600),
(8, 'Furniture', 'Sofa', 'North', 700);

SELECT category, SUM(sales) AS total
FROM sales
GROUP BY category;
```
